Task 3.3 - System Test Execution

Description

In this task, you will act as an independent QA team. You will receive a requirement list and a working codebase developed by another group, and your responsibility is to perform manual system-level testing to verify that the delivered software fully satisfies all specified requirements.

Your objective is to achieve:

- **100% requirement coverage**, meaning every requirement must be validated by at least one system test
- **Complete and verifiable documentation** of test results, so that outcomes are clear, reproducible, and auditable by a third party

This task reflects real-world software delivery scenarios, where independent QA teams assess whether an external development team has met agreed contractual and functional requirements.

Expected Outcome

System Test Table (Minimum one test per requirement):

Test ID	Requirement ID	Test Scenario	Input/Steps	Expected Result	Actual Result	Pass/Fail	Evidence (link/screenshot)

Evaluation Criteria

- **Requirement Coverage Completeness:** All requirements must be tested.
- **Quality of System Test Design:** Test scenarios are realistic, clearly defined, and appropriate for system-level validation rather than unit or integration testing.
- **Documentation Quality:** The system test table is complete, well-structured, and consistent in terminology and formatting. Requirement IDs, test IDs, and results are used correctly and consistently throughout the document.

Our Submission

Requirements from Group 16:

REQ-01 [Essential] As a user, I want the system default interface to be a dashboard from which I can access “conversations” which are channels used to discuss with the AI and that can be attributed either “Academic Work” itself subdivided by the different courses I take or manage, or to “Private”. The conversation shall be arranged chronologically, so that I can access my most recent use of the AI. A conversation shall look like a discussion window.

REQ-03 [Essential] As a student, I want to upload course materials (slides and notes) into a secure, isolated sandbox so that the AI provides answers based strictly on my specific curriculum, rather than general data. Said answers must contain verifiable citations from the provided material.

REQ-04 [Conditional] As a student, when the AI is in brainstorming mode, it should keep a log of the prompt and the idea it generated. This must be accessible via a button in the conversation interface.

REQ-22 [Essential] As a Student, I want to easily access a "Report Bias" button on every response, so that I can flag discriminatory content and help maintain an inclusive learning environment.

REQ-29 [Essential] As a Student, I want the system to utilise "PII Detection Filters" (e.g., regex for phone numbers, emails) that war n me or block the message if I accidentally type personal contact details, so that I do not inadvertently share data that identifies me.

REQ-30 [Essential] As a Student, I want the interface to provide a "Contextual Consent Pop-up" if I attempt to upload academic records (like a transcript), so that I can explicitly grant permission for that specific functionality.

REQ-32 [Essential] As a Student, I want my responses to reflection field questionnaires and feedback surveys for the administration to be anonymised by the system, so that I can provide honest feedback without fear of retaliation.

REQ-36 [Essential] As a Student, I want to submit feedback or complete satisfaction surveys directly within the application, so that the administration can measure my perceived value of the tool

Test Table

Test ID	Requirement ID	Test Scenario	Input/Steps	Expected Result	Actual Result	Pass/Fail	Evidence
TC-01-1	REQ-01	Verify default landing page is the dashboard	1. Run the website. 2. Open http://localhost:3000.	The user is taken to the dashboard by default.	As expected	Pass	
TC-01-2	REQ-01	Verify conversations are categorized into Academic and Private	1. Open the dashboard. 2. Inspect the sidebar conversation area.	The sidebar shows separate Academic and Private conversation categories.	As expected	Pass	
TC-01-3	REQ-01	Verify a conversation opens as a discussion window	1. Open an existing conversation from the sidebar.	The selected conversation opens in a chat/discussion-style interface.	As expected	Pass	
TC-01-4	REQ-01	Verify academic conversations are grouped by course and arranged chronologically	1. Reload the dashboard. 2. Review academic conversation groups and ordering.	Academic conversations are grouped by course and ordered by most recent activity.	As expected	Pass	
TC-02-1	REQ-03	Verify that course materials can be uploaded into the sandbox	1. Open a conversation. 2. Click the upload button, select "Confirm & Upload". 3. Select a course material file. 4. Confirm the upload.	The system allows the user to upload course material after confirmation.	As expected	Pass	
TC-02-2	REQ-03	Verify that the AI answers based on uploaded material and provides verifiable citations	1. Upload a document with identifiable content. 2. Ask a question based on that document. 3. Inspect the response.	The AI answers using the uploaded material and includes verifiable citations from it.	No actual AI-generated answer provided during testing.	Fail	File

Test ID	Requirement ID	Test Scenario	Input/Steps	Expected Result	Actual Result	Pass/Fail	Evidence
TC-03	REQ-04	Verify that brainstorming mode logs the user prompt and generated idea, and that the log is accessible via a button in the conversation interface	1. Open a conversation. 2. Enable brainstorming mode. 3. Enter a prompt and send it. 4. Check whether the generated idea is logged. 5. Verify that the brainstorming log can be accessed again.	When brainstorming mode is enabled, the system logs both the user prompt and the generated idea, and the log is accessible through a button in the conversation interface.	As expected	Pass	
TC-04	REQ-22	Verify that every AI response includes an easily accessible "Report Bias" option for flagging discriminatory content	1. Open a conversation containing AI responses. 2. Move the mouse over an AI response. 3. Click the Report Bias button. 4. Click "Confirm Report" to submit the report.	The user can access the Report Bias option on an AI response and successfully submit a bias report after confirmation.	As expected	Pass	
TC-05	REQ-29	Verify that the system warns the user when personal contact details are entered in a message	1. Open a conversation. 2. Type a name, address, phone number, and email address into the message input field in separate tests. 3. Attempt to send each message.	The system warns the user or blocks the message when personal contact details are detected.	No warning was shown for a name or address. A warning was shown for format like test@test.com and +4712345678, and the user had to confirm before sending.	Partial	

Test ID	Requirement ID	Test Scenario	Input/Steps	Expected Result	Actual Result	Pass/Fail	Evidence
TC-06	REQ-30	Verify that the system provides a contextual consent pop-up when uploading academic records	1. Open a conversation. 2. Click the general upload button. 3. Select a file representing an academic record, such as a transcript. 4. Observe the system response before upload.	The system provides a contextual consent pop-up specifically related to uploading academic records, allowing the user to explicitly grant permission for that functionality.	The interface only provided a general document upload button, no dedicated notification was observed.	Fail	
TC-07	REQ-36	Verify that the application allows students to submit feedback and satisfaction ratings directly within the system	1. Open the feedback window. 2. Select a rating. 3. Enter written feedback. 4. Submit the form.	The application provides an in-app interface for submitting satisfaction ratings and written feedback.	As expected	Pass	
TC-08	REQ-32	Verify that feedback submitted through the in-app feedback window is anonymised	1. Open the feedback window in the application. 2. Enter a rating and written feedback. 3. Submit the feedback. 4. Check whether the system displays or stores any visible personal identity information together with the submission.	The submitted feedback is anonymised and does not expose the student's identity in the visible interface.	History feedbacks can be found in "My Past Feedback", but no clear sign indicates that feedbacks are really anonymised.	Partial
